## Re: CATS testing update

Dear Parent(s) and Carer(s)

During their first week with us students in Year 12 completed a series of 'Cognitive Ability Tests' known as CAT tests. These tests enable us as a school to 'baseline' all of the students and provide teaching staff with additional information in addition to the Teacher Assessed Grades (TAGs) received for GCSE.

We have produced a 'Parent Report' of your child's individual CAT test which you can now access via their Go4School's page. Your child also has access to this report on their individual Go4School's page. The report can be accessed at the very bottom of the HTML page.

This report, which is summative in nature, gives you a broad perspective of their strengths and possible ways that you can support them with their learning over the next 2 years. The report is 'comparative' in that it compares how your child performed in the test, to a national benchmark. Please do not be concerned if you feel your child did not perform at a high level in the CAT test – students have had a hugely disruptive past 18 months of schooling and we would expect the data to be lower than in previous pre-COVID comparative years.

The test results are only there to aid your child's teachers as they plan their learning over the next 18 months and are used for no other purpose.

A copy of the sorts of questions your son/daughter had to answer can be found at the end of this letter.

If you have any questions, please do not hesitate to contact us at the school.

Yours sincerely

Mrs J Marshall  
**Head of Year 12**

Mr R Bell  
**Deputy Head/Director of 6<sup>th</sup> Form**

## Example questions

### Verbal Reasoning Battery – thinking with words

#### Verbal Classification

Three words are presented which are similar in some way or ways. From a selection of five possible answers, the student must identify a fourth word with similar properties.

The answer is snow because rain, fog and sunshine are all types of weather and snow is also a type of weather.

rain      fog      sunshine

#### Verbal Analogies

A pair of connected words is presented alongside a single word. From a selection of five possible answers, the student must select a word to complete the second pair in the same way.

The answer is window, because a carpet goes on a floor and a curtain hangs at a window.

carpet → floor : curtain →

### Quantitative (or Numerical) Reasoning Battery – thinking with numbers

#### Number Analogies

Two pairs of related numbers are presented. From a selection of five possible answers, the student must select a number to complete a third pair.

The answer is 8. Here 1 add 1 makes 2, but that doesn't work for the second pair because 5 add 1 is 6, not 10. Instead, you have to multiply by 2 to get the second part of each pair, so 4 times 2 is 8.

[1 → 2]      [5 → 10]      [4 → ?]

#### Number Series

A sequence of numbers created by a transformation rule is presented. From a selection of five possible answers, the student must identify the rule and continue the sequence.

The answer is 15. There are two number patterns in this series. The first, third and fifth numbers go down by 1 at a time – 18, 17 then 16. The numbers in between them go up by two at a time – 5, 7 then 9. This means the next number must be 16 minus 1, giving 15.

18 5 17 7 16 9 →

## Non-verbal Reasoning Battery – thinking with shapes

### Figure Classification

Three designs are presented which are similar in some way or ways. From a selection of five possible answers, the student must identify a fourth design with similar properties.

The answer is E because it is the only answer choice that is a striped semi-circle, like the first three figures.

### Figure Matrices

Designs are presented in a grid with one empty square and, from a selection of five possible answers, the student must identify the missing design.

The answer is C because in the top pair 'one arrow up' goes to 'two arrows up', so in the second pair 'one arrow down' must go to 'two arrows down'.

## Spatial Ability Battery – thinking with shape and space

### Figure Analysis

A series of diagrams shows a square being folded repeatedly, and then punched through with holes. From a selection of five possible answers, the student must identify how the paper will appear when unfolded.

The answer is D. The hole is punched through both layers of paper, so as it is unfolded the holes will be a mirror image of each other, with the crease being the mirror line.

### Figure Recognition

Several complex designs are presented along with a single target shape. From a selection of five possible answers, the student must identify the target shape within one of the complex designs.

The answer is E. It isn't A because that shows the target flipped over. It isn't B or C because they have shapes that are the wrong size.
